

Project name	Corp. Building
Country	Arizona, USA
Application	Cooling water
Flow rate	454 m ³ /h; 2,000 USgpm
Filtration degree	100 micron
Water source	Open basin cooling tower
Filtration solution	2 x 8"SAF-6000 Filters
Installation date	6/2003

The Corp. building management group owns and operates a large office building in Phoenix. Three years ago they were provided with sand separators to protect their cooling tower on the newly built building. The sand separators never performed to their satisfaction and were replaced with the AMIAD screen filters that are guaranteed to remove all partials greater than 100 micron.
